

Collect what you are owed without upsetting customers

Reads due dates from Logo, reminds the right person on the right channel, stops when paid and measures the result.

Highlights

Staged reminders

Before, on and after due date scenarios; templates per customer group, quiet hours and holiday calendar.

E-mail and WhatsApp

The official WhatsApp Cloud API (with your own Meta business account) and e-mail; the same reminder never goes out twice.

Customer statement

Sign-in-free statement, open items and invoice PDFs behind a signed link.

Measurement

Ageing, reminded and subsequently collected amounts, days-to-collect trend.

THE PROBLEM

Why are collections late?

- Overdue balances sit in Logo, but nobody reminds customers on time; the list is exported to Excel at month end.
- Reminders depend on people: one customer is chased twice, another not at all.
- Payment promises and disputes get lost in e-mail; sales and accounting do not see the same picture.

THE SOLUTION

What does Vade do?

- Reads due dates and balances from Logo and runs staged scenarios before, on and after the due date.
- Writes to the right contact by e-mail and WhatsApp, respecting quiet hours and the holiday calendar.
- Stops automatically once payment arrives; promises, disputes and days-to-collect are tracked on one screen.

WHY IT IS DIFFERENT

The difference

- Does not write to Logo; your accounting records stay as they are.
- Preview and approval before sending; every message is logged with its recipient and reason.
- A signed link shows customers their own statement and lets them leave a payment promise.

Frequently asked questions

Does Vade write to Logo?

No. Vade only reads customers, due dates and balances from Logo; collections are still entered in Logo, and Vade stops reminding once it sees the payment.

Which channels are used?

E-mail and WhatsApp. Each customer group can have its own templates, quiet hours and holiday calendar; messages can go through preview and approval.

How can I try it?

You can browse every screen with sample data in the demo. To try it with your own data, a Logo connection is enough; it is installed on your server.

How much does it cost?

Pricing depends on the number of companies and users. Request a quote and we will clarify it in a short call.

Product facts

WHO IT IS FOR

Finance and accounting managers, business owners

ACCESS

On-premises Windows service + browser interface

SETUP

Setup wizard, Logo SQL or Bridge connection

COMPATIBILITY

Logo Tiger / GO, SQL Server

LICENCE

In pilot; packages are shared during early access
